

# The Aerox®-Injector Odour Abatement using innovative Cold Plasma Technology

*The Aerox®-Injector is a non-thermal plasma unit that is fitted outside the process gas duct. Clean, ambient air is used to generate oxygen radicals, which are injected into the exhaust gas flow, oxidising the odour molecules present and thereby rendering them inoffensive.*

- **Compact!**
- **Cold plasma unit remains clean!**
- **Suitable for even saturated exhaust gas flows!**
- **High odour reduction rates!**
- **Environmentally friendly and sustainable!**

- 1 Aerox®-Injector
- 2 Plasma modules
- 3 Custom adapter
- 4 Heater
- 5 3-Stage filter
- 6 Injection fan
- 7 Process duct
